

1 Results of the Questionnaire from the Previous Report

As of the end of FY2005, we had received 242 invaluable opinions regarding the implementation of our environmental activities through the questionnaire attached in the 2005 Kyushu Electric Power Environment Action Report (including the digest version) published in June 2005.

These included opinions to the effect that a bigger font size would make the report easier to read and we are confident that these have been addressed in the latest document.

Understandability

Note: These figures are the total portion of those who said the report was "easy to understand" or "somewhat easy to understand".

Rating of our environmental activities

Note: These figures are the total portion of those who rated Kyushu Electric Power's environmental activities as "excellent" or "fair".

2 Results of the Survey of Mother's Awareness and Behavior on Environmental Issues

We conducted surveys on participants in Eco Mothers' activities (or guardians when such activities were held for children).

In FY2005, we distributed 9,713 questionnaires and received 3,795 responses (a response rate of 39.1%).

Activity most effective for enhancing children's environmental education (multi-choice)

Note: Portion of total responses in which the pertinent answer choice was selected

Activity respondents would try at home (multi-choice)

Note: Portion of total responses in which the pertinent answer choice was selected

Which of our environmental activities impressed you the most and why?

(◆: Activities chosen by a large number of respondents; []: Number of votes; ○: Main reasons)

◆ Activities we can all partake in [53]

- We can prevent global warming by saving electricity in our daily lives. Communicate this message to as many people as possible.
- There are specific examples showing how readers can participate in environmental activities.

◆ Efforts to address environmental issues [50]

- Lowering CO₂ emission intensity is a given; reducing overall emission volume is also necessary.
- I had thought that Kyushu Electric Power based its thinking around nuclear power, but it is also looking into natural sources of energy.

◆ Communication activities [26]

- The Eco Mothers Project allows for parent-and-child participation, and picture card theater shows make it easy for children to understand the message and, therefore, inspire them to participate.
- Kyushu Electric Power places importance on community ties, and has forums for public opinions.

◆ Local community activities [22]

- It will be vital for Kyushu Electric Power to protect the environment in cooperation with local communities.
- The message that the company would not try to save the Earth by itself but would enlist local help left an impression on me.

Opinions and requests regarding the Eco Mothers Project and Kyushu Electric Power's environmental activities

- When we got home, my son told me about the Eco Mothers show. "CO₂ will come if you open the fridge or leave rubbish lying around" he said. Even a child of four was able to learn something. Thank you very much.
- If we don't change, the planet is in trouble... I had the general idea, but not enough to actually do anything about it. I was pleasantly surprised to find there was something I could do at home; I'll do my part from now on.
- Please come to talk to our kindergarten once more. My daughter said it was great fun. Next time I'd like to take part with her.
- We don't really talk about global environmental issues at home, so I think this kind of activity is good in raising children's interest.
- I hope Kyushu Electric Power continues to promote the Eco Mothers Project and its other environmental activities widely throughout the community so that, as is the case with Cool Biz, eco-beneficial things become norms of society.
- I'd like Kyushu Electric Power to not stop at picture-book readings, but to hold all sorts of events with environmental themes, such as those where we can see what kind of recycled items there are out there.

3 Results of the Nihon Keizai Shimbun 9th Nikkei Environmental Management Survey —Kyushu Electric Power places 4th in electricity and gas category—

The 9th Nikkei Environmental Management Survey was conducted in 2005, with Kyushu Electric Power ranked fourth among 17 companies in the electricity and gas category.

Outline of the Survey

Period	August through November 2005	
Survey method	Sending questionnaire by mail and reviewing environmental reports, etc. • Survey participants include listed companies: 1,747 manufacturers and 2,306 non-manufacturers (including those in the construction and energy sectors). • The valid response rates were 32.0% for manufacturers and 19.6% for non-manufacturers.	
Evaluation method	Companies in the electricity and gas category were ranked based on according to the total score attained by each company in the following six areas.	
6 categories for evaluation	Management structure	Systems pertaining to environmental management systems, environmental education, and information disclosure.
	Long-term goals	Implementation of a mid- and long-term vision for reduction of environment load.
	Measures against pollution	Conditions of air pollutant emissions; chemical substance management and measures against soil contamination.
	Resources recycling	Commitment to reduction of waste products and final disposal volumes, and to recycling; waste management.
	Measures against global warming	Track the company's greenhouse effect gas emissions and reduction targets; Kyoto Protocol-related activities.
	Offices	Environmental measures implemented at offices

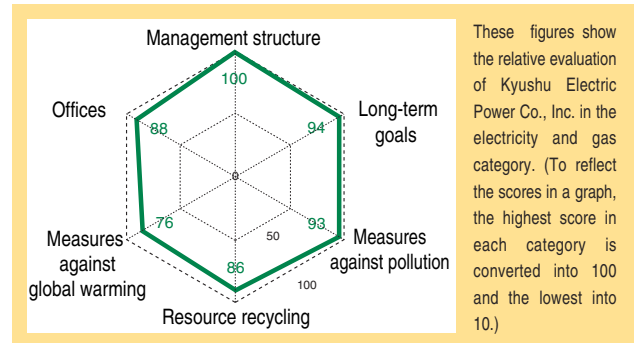

Analysis of Results; Improvement Measures

From having been in top position in the previous fiscal year, the ranking of Kyushu Electric Power dropped in FY2004. One of the causes of this unfavorable result was that CO₂ emissions increased by 11% from FY2003 due to an increased volume of net system energy demand. Nevertheless, our CO₂ emission intensity for FY2004 was the lowest among the nine electricity utility companies.

Beginning in FY2006, we are working to improve areas surveyed in which environmental activities were deemed in need of improvement.

	Area for improvement	Action taken
Kyushu Electric Power	Reduction of company vehicle fleet CO ₂ emissions	• Systematic replacement of fleet vehicles with fuel-efficient cars, and introduction of fuel management targets.
	Improve efficiency upon outsourcing of distribution	• Adjustments to bring this area in line with the revised Law Concerning the Rational Use of Energy.
Kyushu Electric Power Group	More robust information disclosure	• Data about companies producing large environmental loads is published through the Kyushu Electric Power website. • The occurrence or existence of environmental accidents, problems, and litigation are all made public.
	Investigate stronger environmental targets	• Incorporation of environmental targets to the business performance management system that better suits the circumstances of each group company. • Expansion of Kyushu Electric Power industrial waste landfill targets to include group companies.

Kyushu Electric Power's scores

4 Results of Employees' Environmental Awareness Survey

For thorough implementation of corporate environmental activities, it is essential for each employee to have high and constant environmental awareness. In discussing how to improve our environmental activities, Kyushu Electric Power utilizes what it has learned about employees' awareness and understanding of environmental activities, their involvement in the activities, needs, and changes in these aspects over the years.

Outline of the Survey

Period	May 23 (Monday) through June 3 (Friday), 2005
Subjects	12,571 employees (All employees except executives and directors at the head office)
Responses	7,386 (response rate: 59%) [Response rate of the previous survey (FY2004): 56%]
Method	Questionnaire via e-mail using the intranet (anonymous survey)
Contents	The purpose of this survey was to understand employees' awareness and understanding levels of and involvement in each environmental activity. It focused mainly on activities ranked poorly in the previous survey and introduced measures to improve them.

Analysis of Results; Improvement Measures

Support from the Environmental Affairs Department for business units resulting from the FY2004 survey has led to improvements in understanding and implementation of environmental management. The company has received requests for continued support and supervision by the Environmental Affairs Department.

[Specific improvements]

- New specialist training for EMS (sat by 142 people)
- Support and supervision for reinforcement of internal environment auditing. (Support provided beginning in FY2006 under supervision of the Environmental Affairs Department.)
