## **Changing Application of Pre Service Inspection of Sendai Nuclear Power Unit No. 1**

Sendai Nuclear Power Unit No.1 has restarted generating electricity on August 14<sup>th</sup>, and been conducting the adjustment operation as 95% output. We are expecting that the plant will reach constant rated thermal power output operation on August 31<sup>st</sup>, and have a check of the inspection No.5, which comprehensively confirm the performance of the nuclear power station, on September 10<sup>th</sup>

Based on that, we have changed application of Pre Service Inspection of Sendai Nuclear Power Unit No.1, which was applied on March 19<sup>th</sup> in this year, and submitted that to the Nuclear Regulatory Authority.

We will continue to make sincerely an all-out effort to deal with the Nuclear Regulation Authority's inspections, and carry out carefully remaining process, putting utmost priority to safety.
