Kyushu Electric Power Co., Inc.  
Kyuden International Corporation

**Invested in and formed a strategic partnership with Enernet Global Inc.**

- building electricity supply network of local production for local consumption utilizing renewable energy -

Kyuden International Corporation invested in Enernet Global Inc. (“Enernet”), a United States-based venture company, and the companies also formed a strategic partnership.

Enernet develops microgrid and Distributed Energy Resources projects<sup>※</sup> which combine renewable energy, battery storage, gas and existing generation, including diesel or the grid. Enernet uses its in-house proprietary software platform to rapidly design an optimally sized and operated generation system.

Enernet’s projects provide more robust, cost-effective and green electricity for commercial and industrial, mining, hospitality, remote community and utility customers, with current operations in Asia, Oceania, the Caribbean and, most recently, Africa.

In order to realize a sustainable society, as listed in the Kyuden Group Management vision 2030, by investing in and forming a strategic partnership with Enernet, Kyuden Group will accelerate further microgrid business by co-development with Enernet. Together, we will reduce carbon emissions by displacing diesel power plants, driving positive environmental impact.

※ Electricity supply projects of local generation on-site using various sources such as diesel, solar and so on for local customers as consumers in off-grid areas.

[Overview of Enernet Global Inc.]

Item	Description
Company Name	Enernet Global Inc.
Established Date	May, 2015
Headquarters Location	New York, USA
President	Paul Matthews
Business Activity	Building and Operating microgrids
