Kyuden International’s Solar and Battery Storage Project in Egypt Wins PFI Awards 2025 –Appraisal of a large project finance structure in North Africa–

Kyuden International Corporation is pleased to announce that the large-scale solar power plant and battery energy storage system (BESS) project in Egypt has received PFI Awards 2025 on February 19, 2026.

The PFI Deal of the Year awards are handed out each year by Project Finance International (PFI) , which recognizes notable project finance transactions globally. In the “African Deal of the Year 2025” category, the project, in which we participate with AMEA Power, was awarded for successfully closing a project finance loan in a single-site, large-scale solar power plant and battery energy storage system in North Africa.

Building on this milestone, Kyuden International will further strengthen its presence within the industry while deepening collaboration with a wide range of partners. Through these partnerships, we aim to create and expand business development opportunities and accelerate initiatives toward the realization of “Kyuden Group Strategic Vision 2035” and “Carbon Neutral Vision 2050”.
